

Setup Adobe Reader As Default Program For Image Documents in iSpirits

In general, we encourage iSpirits users to view the images (PDF) with Adobe Reader instead of the web browser. Here is how you set it up:

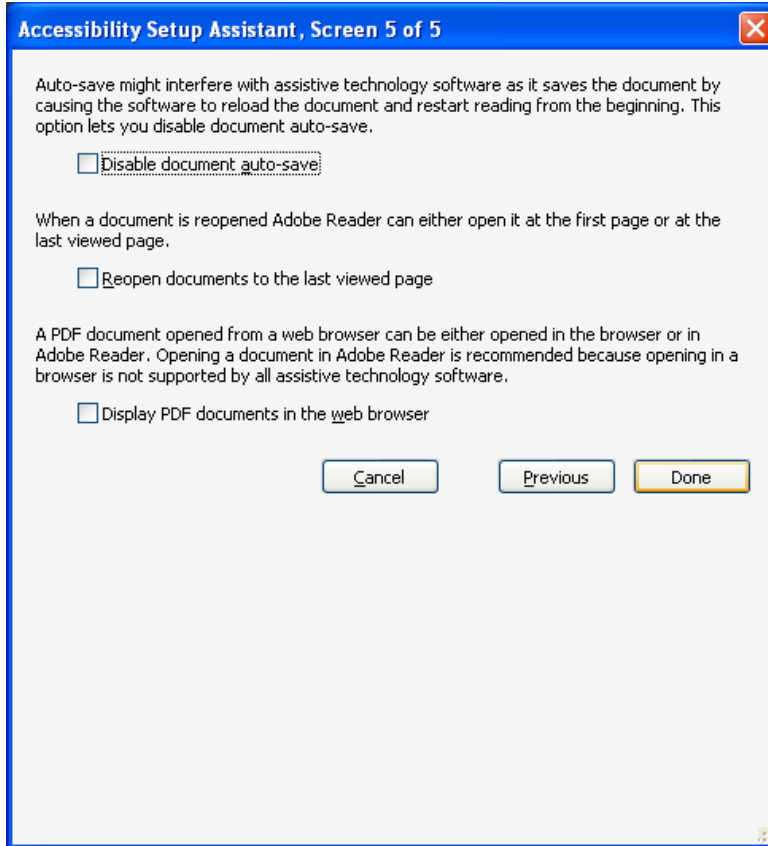

(1) Open Adobe Reader program and click the Accessibility Setup Assistant... from the Document menu

(2) Follow the Wizard until you see the last screen:

(3) Uncheck the Display PDF documents in the web browser option like the screen below and click Done. Close the Adobe Reader.

On your next time to open iSpirits images, your Adobe Reader will be used and you will be in a much better place to view, print or do whatever you want with the PDF documents.
